CLAIMS

We claim:

5

- A method of methanol steam reforming comprising:
 contacting methanol and water vapor with a catalyst;
 wherein the catalyst comprises a palladium on zinc oxide catalyst
 wherein said catalyst has a pore volume and at least 20% of the catalyst's pore
 volume is composed of pores in the size range of 0.1 to 300 microns; and
- forming hydrogen from the reaction of said methanol and water vapor at a rate of
 at least 1.5 mole methanol per gram catalyst per hour (1.5 mole methanol / (g
 catalyst)(hr)).
- A fuel processing system comprising a fuel source connected to a reactor; wherein the reactor contains a palladium on zinc oxide catalyst wherein said catalyst has a pore volume and at least 20% of the catalyst's pore volume is composed of pores in the size range of 0.1 to 300 microns; and a fuel cell, wherein the fuel cell is connected to the reactor such that hydrogen gas generated in the reactor can flow into the fuel cell.
- 3. The fuel processing system of claim 2 wherein the reactor comprises an inlet an outlet and futher wherein the catalyst and the reactor walls define an open channel from the inlet to the outlet.
- 4. The fuel processing system of claim 2 wherein the fuel source comprises a tank containing methanol.
 - A method of alcohol steam reforming comprising:
 contacting methanol and water with a catalyst;
 wherein the catalyst comprises palladium or ruthenium on cerium-promoted
 zirconia or alumina; and

30

forming hydrogen from the reaction of said methanol and water vapor.

- 6. A method of alcohol steam reforming comprising: contacting methanol and water with a catalyst;
- wherein the catalyst comprises a palladium-ruthenium alloy on zirconia or alumina; and

forming hydrogen from the reaction of said methanol and water vapor.

7. The method of claim 6 wherein the catalyst comprises a higher weight percent of palladium than of ruthenium.
